In an effort to address the Quick Fixes from the original Paperwork Reduction Committee Report the Network Operations Office has completed the following activities to eliminate excessive paperwork, paper utilization and reporting practices. This activity development occurred with the communication and partnership with AHCCCS.

**Quarterly Prescriber Gains and Loss Report**

1. ADHS/DBHS submitted a proposal to AHCCCS to replace the current format of the Quarterly Prescriber Lost & Gained Report with a Prescriber Sufficiency Analysis Report.
2. AHCCCS accepted the ADHS/DBHS request by agreeing to accept the proposal contingent upon including an executive summary comparison of the prescriber sufficiency analysis and findings from compliant data for the respective quarter related to accessibility (i.e. member complaints regarding availability of prescribers).
3. The summary is to be part of the Prescriber Sufficiency Analysis Report submitted quarterly

**Geo-mapping**

In 2006/2007, ADHS/DBHS began the development of internal capacity to assess the statewide networks for access to certain provider types using geo-mapping technology. In the DBHS 2007/2008 Annual Plan the Department initiated the geo-mapping analysis process to enhance the assessment of statewide network sufficiency. The 2007/2008 DBHS Annual Plan provided geo-mapping analysis for the following providers/services:

- Outpatient Prescriber Availability
- Respite Providers
- HCTC Homes for Adults/Children
- Outpatient Clinics

The Department continues to utilize this Data Element analysis in the 2008/2009 DBHS Annual Network Development and Management Plan. In addition, the Department intends to further utilize this data to develop and establish distance/travel standards and density standards for access to specific behavioral health services.

The 2008//2009 adult and child populations the geo-mapping analysis categories will be:

- Pharmacies
- HCTC Homes for Adults/Children
- Outpatient Clinics
