Tell your parents that students 11 years and older entering 6th-12th grades should be vaccinated against serious diseases.

Why?

It could save YOUR life!  
And your friends' lives too!

Protect yourself from serious diseases like meningitis and whooping cough.

Ask your healthcare provider about getting vaccinated.

For more information, visit [www.azdhs.gov/phs/immun](http://www.azdhs.gov/phs/immun) or call your local health department or healthcare provider.
