

HOW CDC

is helping children and states ...

Almost all newborns in the United States now have a hearing screening

{ 1 in 50 }

are referred for follow-up testing

CDC funds **Early Hearing Detection and Intervention (EHDI)** programs to make sure that children who are **deaf or hard of hearing** receive critical services

When children who are deaf or hard of hearing start getting critical services early, they are more likely to reach their full potential and live a healthy, productive adult life

1 MONTH

All newborns should receive a hearing screening before 1 month of age

3 MONTHS

All infants who are possibly deaf or hard of hearing should have a complete hearing evaluation before 3 months of age

6 MONTHS

All infants identified as deaf or hard of hearing should receive critical services before 6 months of age

Parents and professionals can work together to find every baby who is deaf or hard of hearing and provide the services they deserve
